

Dear readers,

The Journal of “Almaz – Antey” Air and Space Defence Corporation is a convenient platform for discussing the unique aspects of development of an aerospace defence system in the Russian Federation. Your participation will contribute to implementation of artificial intelligence, supercomputer technologies and support and decision-making systems in the modern ACS.

Also welcome are new, non-standard approaches to development of structural technological elements for weapons and combat equipment, civil products, algorithms and programmes for prospective ASD ACS on the domestic hardware and software platform. Your point of view and creative approach are really important for us!

**Deputy General Designer –
Head of Scientific and Technological
Centre of Aerospace Defence**

S. V. Popov
